

Cast Plaques

The maximum individual plate size is 980 x 580mm but we can accommodate larger panel sizes by 'tiling' a number of plates together on a backboard. A wide range of British Standard colours or RAL Specification numbers are available.

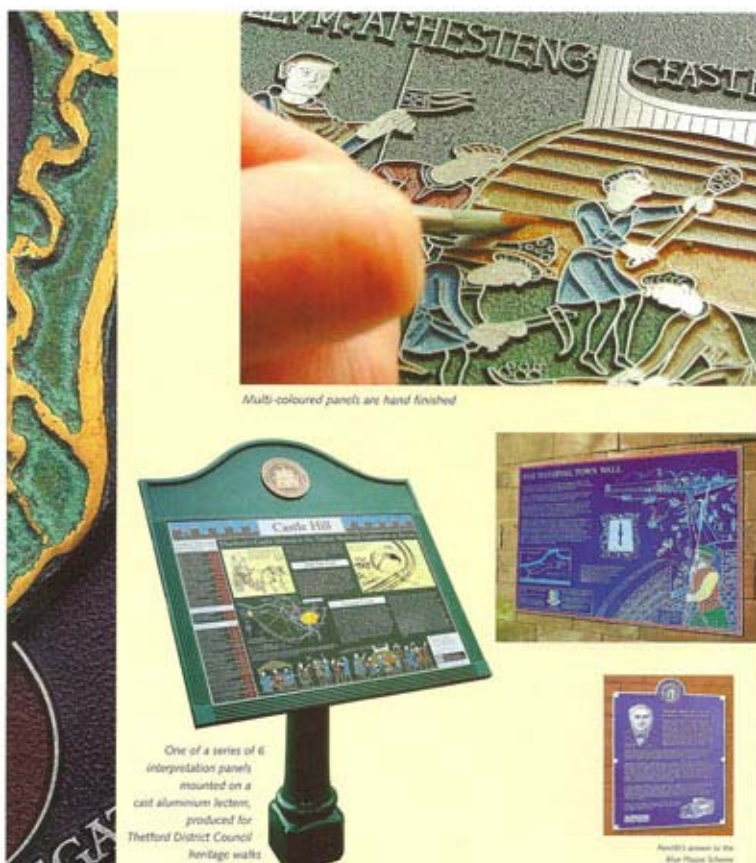

braille and tactile signage

The Disability Discrimination Act states that "...the physical changes and adjustments, to buildings that allow access and information, should be made to all buildings by 2004... The Joint Mobility Unit, together with the RIBA, recommend that all public buildings and service providers, including hotels, public transport and municipal buildings should use braille and tactile signage for all projects.

zinc interpretation panels

Unlike pantograph engraving or shallow chemical etch into steel or brass the Photocast deep etch system allows etch depths only restricted by the thickness of the substrate you choose. This process, together with detailed text and illustrations is the perfect solution for long-lasting quality historical interpretation panels.
